

Case Study:

Profile

Company - Powerstar
Country - South Africa

Products Used:
EC-1V

Featured Product: EC-1V

“The EC-1V is simple and easy to use...we would definitely recommend Electrocoder products”

Nic Alexander, Operations Manager
at Powerstar S.A

Who are Powerstar?

EMSc (UK) Ltd is an engineering market leader renowned for the innovative design of the Star range of energy saving solutions. The companies vision focuses on helping clients make their organisation more energy efficient through cutting edge technology solutions.

PowerStar is one of their six energy saving products. PowerStar are a global company with offices in England, Cyprus, Australia and expanding with new partners in many other locations.

Why did they need the EC-1V?

“Our main reason for purchasing the EC-1V data logger was to log voltages so that we can work on optimising the sites for our customers.

We have used Metrel power analysers before but they are more complicated and not as easy to use as the EC-1V. We have found the EC-1V data logger simple and easy to use, and would definitely recommend Electrocoder products”

After using the EC-1V

“The analysis of the data enables us to propose energy savings on sites that over voltage”

Purchasing experience

“We liaise with Acksen when purchasing products, they offer us a great service.”

Comments from some additional users of the EC-1V...

W & H Romac Ltd

"We purchased the EC-1V as we had an on site problem with power supply to traffic signal controller. It was needed in order for us to inform the local authority of the low voltage issues.

The ElectroCorder EC-1V performed well, and the results produced by the Electrosoft software were easily understood. Using the information we obtained we were then able to pass our findings to the client and they were then able to action on this report.

I would recommend this product as it performed well and produced results that were easily understood."

- Rob McDonald, Managing Director at W & H Romac Ltd

Evo Green PLC

"We used the EC-1V as we had a low voltage issue and for voltage optimisation. It was our first time conducting a data logging exercise.

The EC-1V was chosen on recommendation, it is simple and easy to use, robust and easily programmable and the data was easily interpreted. The EC-1V is used extensively by our business and we are planning on purchasing more equipment fairly soon."

- Lee Chambers, Technical Director at Evo Green

Saga Group Ltd

"We have purchased a number of different ElectroCorder units and have used them for recording power supplies to our building and distribution.

The product performed fantastically. Based on our findings we found some overloaded supplies, so we had to upgrade distribution and cabling.

Ordering from Acksen was very easy and delivery was very quick. I would most definitely recommend the EC-1V"

- Derek Foreman, Facilities Manager at Saga Group Ltd

Total Control Services

"We have used the ElectroCorder products for surveys of client sites interested in Voltage optimisation. We found the Electrosoft software fully comprehensive, easy to use and interpret.

Using the information that was uncovered from the data gathered, we were able to advise on the effectiveness and viability of voltage optimisation including projected savings."

- David Edwards, Energy Sales Account Manager at Total Control Services
